SKILLS

Backend:

Python, Django, DRF, FastAPI,
Celery, Redis,
OpenAI API, RAG pipelines,
multi-tenant architecture,
Pytest

Frontend:

JavaScript, React, Next.js,
HTML, CSS, Bootstrap

Databases:

PostgreSQL, MongoDB

API:

REST, JWT, role-based
permissions

DevOps:

Docker, Docker Compose,
GitHub Actions, CI/CD, AWS
EC2 / S3,
Nginx / Unicorn,

SUMMARY

Python backend developer with full-stack experience. I build web applications with Django, DRF, and FastAPI — from database design and REST API architecture to deployment on AWS with Docker and Nginx. My work spans e-commerce systems (authentication, product catalogs, cart and checkout flows, external integrations) and AI-powered features (RAG pipelines, OpenAI API). On the frontend I work with JavaScript, HTML/CSS, and Bootstrap to deliver complete, shippable features end-to-end. I write tested, maintainable code and take ownership of projects from first commit to production.

WORK EXPERIENCE

01/2024 - 07/2024

Python Backend Developer — IT-BRAINS

- Developed backend functionality using Django/DRF and FastAPI
- Designed database models and migrations, optimized SQL queries
- Integrated third-party APIs and external services
- Configured deployments to AWS EC2 and Azure
- Built AI-powered text widgets: translation, rewriting, summarization using OpenAI API
- Developed a RAG system combining OpenAI models with a vector database for document-based Q&A

PROJECTS

SaaS Restaurant Platform — Founder | Django · PostgreSQL · Redis · Celery · Docker · Nginx

Designed, launched, and monetized a multi-tenant SaaS platform www.yemak.vip a direct-ordering alternative to food delivery aggregators (Bolt Food, Wolt, Glovo). 4 paying clients on recurring subscriptions. Each client gets an isolated subdomain, demo menu, and admin panel — fully automated onboarding.

Key architectural decision: tenant data isolation via custom ORM manager without separate databases. Async Telegram notifications (Celery + Redis), price_snapshot, rate limiting, CI/CD (GitHub Actions), Docker prod/dev. 79+ tests, 99% uptime on AWS.

SaaS Booking Platform — Founder | Django · Next.js · PostgreSQL · Redis · Celery · Twilio · Nginx

Designed and launched www.reservla.com — a multi-tenant appointment booking platform for service businesses (beauty salons, barbershops, clinics). Each client gets an isolated subdomain (salon.reservla.com), admin panel, staff and schedule management, and automated SMS/email confirmations — fully automated onboarding. Platform is live on AWS, Key architectural decisions: tenant data isolation via custom ORM manager; timezone-aware slot generation with DST support; OTP client auth via SMS (Twilio); async notification pipeline (Celery + Redis); wildcard SSL, subdomain routing via Nginx; JWT with silent token refresh.

EDUCATION

Bachelor in Computer Science — ONTU (Expected 2027)

Python Backend Developer — IT-BRAINS (2023–2024)

Modern Web Design & JavaScript — ITNetwork.cz (2025–2026)
